NEW SERVER SETUP

Most datacentres sell their servers unsecured and with only basic software required to run the system. Our initial setup and security hardening package gives you the opportunity to start with a fully-secured server, thoroughly tested and optimized software running the most stable versions of OS/software.

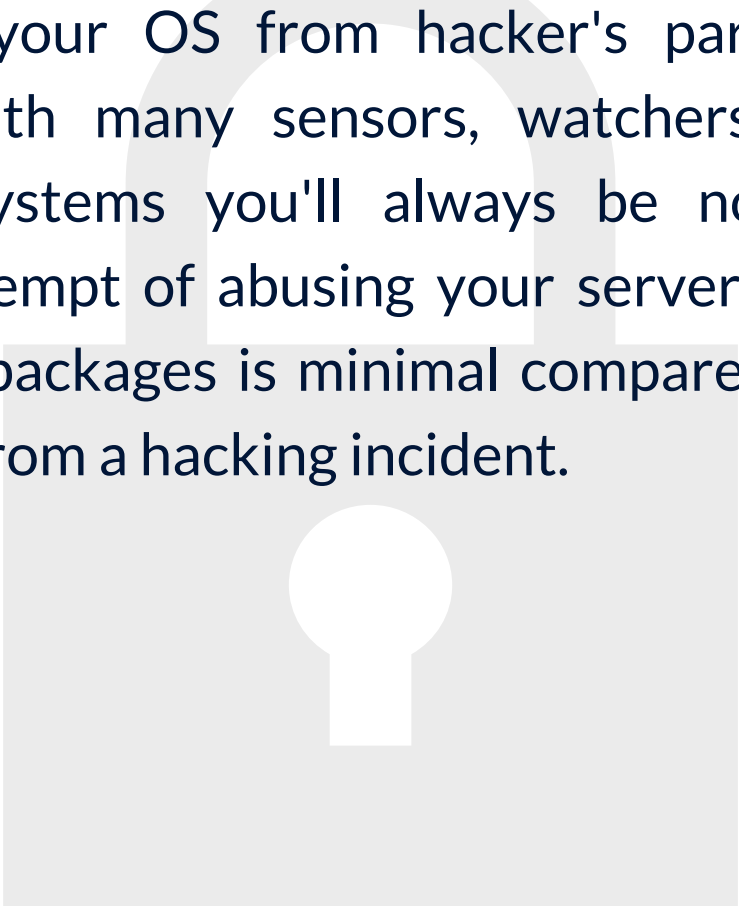

- Basic Security Audit
- Security software installation and hardening
- Upgrade software to the most recent, stable version
- Date/time/time zone setup
- DNS Setup
- Control Panel setup
- Removal of unused/insecure services
- Additional IP installation
- 3-rd party software installation

SECURITY

ServerWizards is pleased to provide you with the most effective and ultimate security solutions for your servers. We'll turn your OS from hacker's paradise into real fortress. With many sensors, watchers and intrusion detection systems you'll always be notified about a slightest attempt of abusing your server's integrity. The cost of our packages is minimal compared to the cost of recovering from a hacking incident.
